

Geometry

Sketchpad Intro

Students will be able to identify and use each of the following tools on the desktop:

Activites:

POINTS

- activate the point tool
- move to the drawing area and create at least three points
- activate the selection tool
- click on different points to select them
- activate the text tool
- select and label different points
- activate the select tool and clear (under EDIT) one or more points

Segments

- activate the segment tool
- move to the drawing area and create at least three segments
- activate the selection tool
- click on different segments to select them
- activate the text tool
- select and label different segments
- activate the select tool and drag one of the endpoints of one of your segments
- select and clear one or more of your segments

Circles

- activate the circle tool
- move to the drawing area and create at least three circles
- activate the selection tool
- click on different circles to select them
- activate the text tool
- select and label different circles
- select and clear one or more of your circles

Q. Can you create two points and the line segment that joins them?

Q. Can you create a line segment and then a circle with that line segment as its radius?

Q. Can you create two line segments or circles that you know for sure are congruent? (same size and shape)
